Air-O-Film® Stretch Lite is ideally suited to the following applications:

## Striking the right balance between downgauging and performance ....

### Environmental Responsibility

We each have a role to play in making the world a better and more sustainable place. At Megaplast we take this responsibility very seriously and as a result we are constantly looking at ways in which we can help the environment.

### Downgauging - Striking a Balance

Small savings can make a big difference when it comes to stretch film. A marginal reduction in the weight of a roll can have a tremendous impact on the operational efficiency. A lighter film means that less material is required and as a result less energy is used in production and transportation. However, a thinner film, does not necessarily mean a better film. When downgauging, a careful balance must be struck so that performance is maintained.

engineering

**NEW Air-O-Film® Stretch Lite delivers the right balance**

### Same Design and Structure

Air-O-Film® Stretch Lite is produced in the same way as regular Air-O-Film® Stretch. It uses the same supporting bands which increase the holding force, distributing it across the entire load and ensuring a stable pallet.

### No Hassle Machine Application

Air-O-Film® Stretch Lite also performs the same and so is still perfect for products wrapped on either semi or automatic wrapping machines that are fitted with power pre-stretching systems.

### High Visibility

Furthermore, Air-O-Film® Stretch Lite is manufactured using the finest components, providing unrivalled clarity and pallet appearance.

Striking the right balance between downgauging and performance ....

**Air-O-Film® Stretch Lite is perfect for solving problems when there is a build up of condensation or moisture. Such as...**

**Hot palletized goods** like baked snacks, pasteurised products, breakfast cereals, pharmaceutical goods, pet foods, etc.

**Chilled or Frozen loads** that require fast cooling after palletization, such as meat, fish, frozen snacks, etc.

## Advantages of

## DOWNGAUGED engineering

### USE LESS - SAVE MORE

Due to the unique design of Air-O-Film® Stretch Lite you use less material wrapping a load when compared to the alternative solutions. Not only does this minimize the packaging cost, it has the added benefit of being more environmentally friendly.

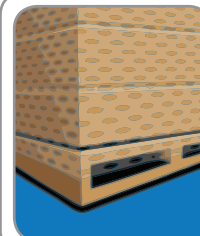

### EXCELLENT PALLET PERFORMANCE

The uniform and reliable holding force of Air-O-Film® Stretch Lite, combined with its impressive lateral strength, ensures perfect pallet stabilization without damaging the carton boxes or other packed materials.

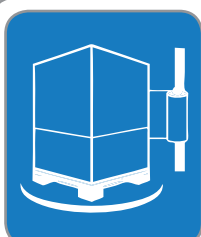

### ENVIRONMENTALLY AWARE

Because Air-O-Film® Stretch Lite uses less material it is more economical. The lighter product uses less energy in production, transportation and ultimately when you apply it to the pallet. It also creates less waste, making for efficient recycling.

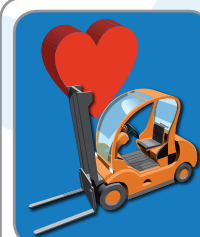

### EXCELLENT FILM PERFORMANCE

The structure of Air-O-Film® Stretch Lite is so robust that it has even been developed to accommodate the pallet on which the load rests. By overlapping the two elements you can be sure that the load is truly secure.

### GUARANTEED PRE-STRETCH

Available in 150%, 200% and 250% ratios, Air-O-Film® Stretch Lite is especially developed for products wrapped on semi and fully automatic wrapping machines equipped with a power pre-stretching system.

### FORKLIFT FRIENDLY

Like netting, the reinforcing strips on competitive products can often come away from the base film and become entangled within the wheels and bearings of forklifts. The design of Air-O-Film® Stretch Lite prevents this from happening.
